

March 18, 2026
ENEOS Xplora Inc.

Participation in “OTC Asia 2026”
One of Asia’s Largest Offshore Energy Exhibitions

ENEOS Xplora Inc. is pleased to announce that we will be exhibiting at the Offshore Technology Conference Asia 2026 (“OTC Asia”), which will be held from March 31 to April 2 in Kuala Lumpur, Malaysia.

OTC Asia is an international exhibition hosted by Petroliaam Nasional Berhad (PETRONAS) that brings together more than 30,000 energy professionals from over 80 countries to advance scientific and technological knowledge related to offshore energy development. ENEOS Xplora will exhibit for the second time, jointly with ENEOS Drilling Limited, our wholly owned subsidiary providing offshore drilling services.

At our booth, we will showcase our track record in Malaysia, including more than 20 years of experience as a gas fields operator*1 off the coast of Sarawak, and the BIGST Project*2, a new low-carbon gas fields development project off the coast of Peninsular Malaysia. In addition, following the integration of ENEOS Corporation’s LNG supply chain operations as of April 1, 2026, we will introduce our natural gas business that covers the entire supply chain from upstream development to downstream operations. We will also present offshore oil and gas development technologies and our latest R&D initiatives, including CO₂ mineralization*3.

Visit our booth and discover how ENEOS Xplora is contributing the sustainable supply of energy across Asia through integrated efforts from upstream to downstream. We look forward to welcoming you soon.

***1 Operator:**

A company responsible for exploration, development, and production activities. We have over 20 years of experience as the operator of the SK10 Block off the coast of Sarawak, Malaysia.

***2 BIGST Project:**

Development of five discovered-but-undeveloped gas fields with high CO₂ content, aiming for low-carbon development through CO₂ separation, capture, and storage (CCS).

***3 CO₂ Mineralization:**

A technology that permanently stores CO₂ underground by converting it into stable minerals through reactions with rock and water.
